THE BOARD OF ADMINISTRATION, in pursuance of the powers conferred upon it by section two and section ten of the Import Duties Act (Bailiwick of Guernsey) 1932, as amended, and of all other powers enabling it in that behalf, hereby orders:—

1. The Orders set out in the First Schedule to this Order are hereby revoked.
2. (1) Subject to and in accordance with the provisions of the principal Laws and of this Order, duties shall be charged on the importation into the Bailiwick of any goods to which this Order applies.
(2) The goods to which this Order applies are goods of a class or description included in the form of tariff set out in the first column of the Second Schedule to this Order.

RULES FOR THE INTERPRETATION OF THE SCHEDULE OF DUTIES

Interpretation of the Schedule shall be governed by the following principles:

1. The titles of Sections, Chapters and Sub-Chapters are provided for ease of reference only; for legal purposes, classification (as between headings) shall be determined according to the terms of the headings and any relative Section or Chapter Notes and, provided such headings or Notes do not otherwise require, according to Rules 2 to 5 below.
2. Any reference in a heading to a material or substance shall be taken to include a reference to mixtures or combinations of that material or substance with other materials or substances. Any reference to goods of a given material or substance shall be taken to include a reference to goods consisting wholly or partly of such material or substance. The classification of goods consisting of more than one material or substance shall be according to the principles of Rule 3.
3. When for any reason, goods are, *prima facie*, classifiable under two or more headings, classification shall be effected as follows:
 - (a) The heading which provides the most specific description shall be preferred to headings providing a more general description (subheadings being disregarded).
 - (b) Mixtures and composite goods which consist of different materials or are made up of different components and which cannot be classified by reference to (a) shall be classified as if they consisted of the material or component which gives the goods their essential character, in so far as this criterion is applicable.
 - (c) When goods cannot be classified by reference to (a) or (b), they shall be classified under the heading which involves the highest rate of duty.
4. Where in a Note to a Section or Chapter it is provided that certain goods are not covered by that Section or Chapter, a reference being made parenthetically to another Section or Chapter or to a particular heading, the Note shall, except in so far as the context requires otherwise, be taken to refer to all the goods falling within that other Section or Chapter or heading notwithstanding that only certain of those goods are referred to by description in the Note.
5. Goods not falling within any heading of the Schedule shall be classified under the heading appropriate to the goods to which they are most akin.
6. Except as provided in a note to a Section or Chapter expressed to be a special note applying to subheadings only, the classification of goods within a heading is to be determined by applying as between subheadings the like Rules as are to be applied between headings, and, except in so far as the contrary intention appears, terms used in a subheading are to be interpreted in the same way as in the heading.

Chapter 40

RUBBER, SYNTHETIC RUBBER, FACTICE, AND ARTICLES THEREOF

NOTES

- Except where the context otherwise requires, throughout this Schedule the expression "rubber" means the following products, whether or not vulcanised or hardened: natural rubber, balata, gutta-percha and similar natural gums, synthetic rubber, and factice derived from oils, and such substances reclaimed.
- This Chapter does not cover the following products of rubber and textiles, which fall generally within Section XI:
 - Knitted or crocheted fabric or articles thereof, elastic or rubberised (other than transmission, conveyor and elevator belts or belting, of rubberised knitted or crocheted fabric of heading No. 40.10); other elastic fabric or articles thereof;
 - Textile hosepiping and similar textile tubing, internally coated or lined with rubber (heading No. 59.15);
 - Woven textile fabrics (other than the goods of heading No. 40.10) impregnated, coated, covered or laminated with rubber:
 - Weighing not more than one and a half kilograms per square metre; or

(ii) Weighing more than one and a half kilograms per square metre and containing more than 50 per cent. by weight of textile material ;
and articles of those fabrics ;

- (d) Felt impregnated or coated with rubber and containing more than 50 per cent. by weight of textile material, and articles thereof ;
- (e) Bonded fibre fabrics impregnated or coated with rubber, or in which rubber forms the bonding substance, irrespective of their weight per square metre, and articles thereof ;
- (f) Fabrics composed of parallel textile yarns agglomerated with rubber, irrespective of their weight per square metre, and articles thereof.

However, plates, sheets and strip, of expanded, foam or sponge rubber, combined with textile fabric, and articles thereof, are to be classified in Chapter 40 provided that the textile fabric is present merely for reinforcing purposes.

3. The following are also not covered by this Chapter :

- (a) Footwear or parts thereof falling within Chapter 64 ;

- (f) Buttons, combs, smoking pipe stems, pens or other articles falling within Chapter 98.

4. In Note 1 to this Chapter and in headings Nos. 40.02, 40.05 and 40.06, the expression "synthetic rubber" is to be taken to apply to :

- (a) Unsaturated synthetic substances which can be irreversibly transformed into non-thermoplastic substances by vulcanisation with sulphur, selenium or tellurium, and which, when so vulcanised as well as may be (without the addition of any substances such as plasticisers, fillers or reinforcing agents not necessary for the cross-linking), can produce non-thermoplastic substances which, at a temperature between fifteen and twenty degrees Centigrade, will not break on being extended to three times their original length and will return after being extended to twice their original length, within a period of two hours, to a length not greater than one and a half times the original length.

Such substances include *cis*-polyisoprene, polybutadiene, polychlorobutadiene (GRM), polybutadiene-styrene (GRS), polychlorobutadiene-acrylonitrile (GRN), polybutadiene-acrylonitrile (GRA) and butyl rubber (GRI) ;

(b) Thioplasts (GRP) ; and

- (c) Natural rubber modified by grafting or mixing with artificial plastic material, provided that it complies with the requirements concerning vulcanisation, elasticity and reversibility in (a) above.

5. Headings Nos. 40.01 and 40.02 are to be taken not to apply to :

- (a) Natural or synthetic rubber latex (including pre-vulcanised rubber latex) compounded with vulcanising agents or accelerators, fillers or reinforcing agents, plasticisers, colouring matter (other than colouring matter added solely for the purpose of identification), or with any other substance ; however, latex merely stabilised or concentrated, and thermo-sensitive and electro-positive latex are to be classified in heading No. 40.01 or 40.02 as the case may be ;

(b) Rubber which has been compounded with carbon black (with or without the addition of mineral oil) or with silica (with or without the addition of mineral oil) before coagulation or with any substance after coagulation ; or

(c) Mixtures of any of the products specified in Note 1 to the present Chapter, whether or not compounded with any other substance.

6. Thread wholly of vulcanised rubber, of any cross-section of which any dimension exceeds five millimetres, is to be classified as strip, rod or profile shape, falling within heading No. 40.08.

7. Heading No. 40.10 is to be taken to include transmission, conveyor or elevator belts or belting of textile fabric impregnated, coated, covered or laminated with rubber or made from textile yarn or cord impregnated or coated with rubber.

8. For the purpose of heading No. 40.06, pre-vulcanised rubber latex is to be deemed to be unvulcanised rubber latex.

For the purposes of headings Nos. 40.07 to 40.14, balata, gutta-percha and similar natural gums, and factice derived from oils, and such substances reclaimed, are to be deemed to be vulcanised rubber whether or not they have been vulcanised.

9. In headings Nos. 40.05, 40.08 and 40.15, the expressions "plates", "sheets" and "strip" are to be taken to apply, and to apply only, to plates, sheets and strip, whether or not printed or otherwise surface-worked but not cut to shape or otherwise worked, and rectangular articles cut therefrom not further worked.

In heading No. 40.08 the expressions "rods" and "profile shapes" and in heading No. 40.15 the expressions "rods", "profile shapes" and "tubes" are to be taken to apply, and to apply only, to such products, whether or not cut to length or surface-worked but not otherwise worked.

6. For the purposes of this Section, the expression "made up" means :
- (a) Cut otherwise than into rectangles ;
 - (b) Made and finished by weaving and ready for use (or merely needing separation by cutting dividing threads) and not requiring sewing or further fabrication (for example, certain dusters, towels, table cloths, scarf squares and blankets) ;

 - (b) The expression "precious metal" means silver, gold, platinum and other metals of the platinum group.
 - (c) The expression "other metals of the platinum group" means iridium, osmium, palladium, rhodium and ruthenium.
5. For the purposes of this Chapter, any alloy (including a sintered mixture) containing precious metal is to be treated as an alloy of precious metal if, and only if, any one precious metal constitutes as much as 2 per cent., by weight, of the alloy.

Alloys of precious metal are to be classified according to the following rules :

 - (a) An alloy containing 2 per cent. or more, by weight, of platinum is to be treated only as an alloy of platinum.
 - (b) An alloy containing 2 per cent. or more, by weight, of gold but no platinum, or less than 2 per cent., by weight, of platinum, is to be treated only as an alloy of gold.
 - (c) Other alloys containing 2 per cent. or more, by weight, of silver are to be treated as alloys of silver.

For the purposes of this Note, metals of the platinum group are to be regarded as one metal and are to be treated as though they were platinum.
6. Except where the context otherwise requires, any reference in these Notes or elsewhere in this Schedule to precious metal or to any particular precious metal is to be taken to include a reference to alloys treated as alloys of precious metal or of the particular metal in accordance with the rules in Note 5 above, but not to rolled precious metal or to base metal or non-metals coated or plated with precious metal.
7. The expression "rolled precious metal" means material made with a base of metal upon one or more surfaces of which there is affixed by soldering, brazing, welding, hot-rolling or similar mechanical means a covering of precious metal. The expression is also to be taken to cover base metal inlaid with precious metal.

8. In this Chapter the expression "articles of jewellery" means :

- (a) Any small objects of personal adornment (gem-set or not) (for example, rings, bracelets, necklaces, brooches, ear-rings, watch-chains, fobs, pendants, tie-pins, cuff-links, dress-studs, religious or other medals and insignia) ; and
- (b) Articles of personal use of a kind normally carried in the pocket, in the handbag or on the person (such as cigarette cases, powder boxes, chain purses, cachou boxes).

9. For the purposes of heading No. 71.13, the expression "articles of goldsmiths' or silversmiths' wares" includes such articles as ornaments, tableware, toilet-ware, smokers' requisites and other articles of household, office or religious use.

10. For the purposes of heading No. 71.16, the expression "imitation jewellery" means articles of jewellery within the meaning of paragraph (a) of Note 8 above, not incorporating pearls,

precious or semi-precious stones (natural, synthetic or reconstructed) nor (except as plating or as minor constituents) precious metal or rolled precious metal, and composed :

- (a) Wholly or partly of base metal, whether or not plated with precious metal ; or
- (b) Of at least two materials (for example, wood and glass, bone and amber, mother of pearl and artificial plastic material), no account being taken of materials (for example, necklace strings) used only for assembly, or of paint, varnish, pearl essence or similar coating materials.

However, heading No. 71.16 does not cover buttons, studs or cuff-links, (heading No. 98.01), dress combs or hair slides, (heading No. 98.12) or buckles, buckle clasps or clasps.

3. Classification of Alloys :
 - (a) An alloy of base metals containing more than 10 per cent., by weight, of nickel is to be classified as an alloy of nickel, except in the case of an alloy in which iron predominates by weight over each of the other metals or of a ferro-alloy or master alloy (as defined in Chapters 73 and 74).

 - (b) An alloy is regarded as being entirely composed of that metal as an alloy of which, by virtue of Note 3, it is classified.
6. For the purposes of this Section, the expression "waste and scrap" means waste and scrap metal fit only for the recovery of metal or for use in the manufacture of chemicals.
7. In this Section, any reference to base metal, or to a particular base metal, is to be taken as including base metal plated with precious metal.

COPPER AND ARTICLES THEREOF

NOTES

1. For the purposes of heading No. 74.02, the expression "master alloys" means alloys (except copper phosphide (phosphor copper) containing more than 8 per cent. by weight of phosphorus) of copper with other materials in any proportion, not usefully malleable and commonly used as raw material in the manufacture of other alloys or as de-oxidants, de-sulphurising agents or for similar uses in the metallurgy of non-ferrous metals.

(Copper phosphide (phosphor copper) containing more than 8 per cent. by weight of phosphorus falls within heading No. 28.55 and not within this Chapter).

2. In this Chapter the following expressions have the meanings hereby assigned to them :

(a) Wire (headings Nos. 74.03, 74.10 and 74.11) :

Rolled, extruded or drawn products of solid section of any cross-sectional shape, of which no cross-sectional dimension exceeds six millimetres.

(b) Wrought bars, rods, angles, shapes and sections (heading No. 74.03) :

Rolled, extruded, drawn or forged products of solid section, of which the maximum cross-sectional dimension exceeds six millimetres and which, if they are flat, have a thickness exceeding one tenth of the width. Also cast or sintered products, of the same forms and dimensions, which have been subsequently

machined (otherwise than by simple trimming or de-scaling).

(c) Wrought plates, sheets and strip (heading No. 74.04) :

Flat-surfaced, wrought products (coiled or not), of which the maximum cross-sectional dimension exceeds six millimetres, and of which the thickness exceeds 0.15 millimetre but does not exceed one tenth of the width.

Heading No. 74.04 is to be taken to apply, *inter alia*, to such products, whether or not cut to shape, perforated, corrugated, ribbed, channelled, polished or coated, provided that they do not thereby assume the character of articles or of products falling within other headings.

(d) Foil (heading No. 74.05) :

Products of a thickness (excluding any backing) not exceeding 0.15 millimetre.

Heading No. 74.05 is to be taken to apply, *inter alia*, to such products whether or not embossed, cut to shape, perforated, coated, printed, or backed with paper or other reinforcing material.

3. Heading No. 74.07 is to be taken to apply, *inter alia*, to tubes, pipes and hollow bars which have been polished or coated, or which have been shaped or worked, such as bent, coiled, threaded, drilled, waisted, cone-shaped or finned. INDEX

This index, which does not purport to be exhaustive and has no legal force, is designed to assist importers in determining the correct classification of the main types of goods. The actual determination of classification depends primarily on the wording of the Tariff heading itself, governed, if necessary, by the Section and Chapter Notes or by the Interpretative Rules.

The index consists of an alphabetical list of goods showing against each item the number(s) of either the Chapter(s) or the heading(s) in which the goods of the description concerned are most likely to be classified. For reasons of brevity individual items

are sometimes not listed, but their place in the Tariff can be found under more general descriptions or under items referring to constituent materials. For example, some individual fruits are not listed, but their classification can be found by referring to the general description "Fruit". Similarly, individual metal manufactures which may not be listed will be found by reference to the constituent metal. In practice, an article should first be sought in the index under its most specific description. If it is not listed specifically reference should be made to a more general description or, if necessary, to the index item for the constituent material of which the article is made.

INDEX

This index, which does not purport to be exhaustive and has no legal force, is designed to assist importers in determining the correct classification of the main types of goods. The actual determination of classification depends primarily on the wording of the Tariff heading itself, governed, if necessary, by the Section and Chapter Notes or by the Interpretative Rules.

The index consists of an alphabetical list of goods showing against each item the number(s) of either the Chapter(s) or the heading(s) in which the goods of the description concerned are most likely to be classified. For reasons of brevity individual items

are sometimes not listed, but their place in the Tariff can be found under more general descriptions or under items referring to constituent materials. For example, some individual fruits are not listed, but their classification can be found by referring to the general description "Fruit". Similarly, individual metal manufactures which may not be listed will be found by reference to the constituent metal. In practice, an article should first be sought in the index under its most specific description. If it is not listed specifically reference should be made to a more general description or, if necessary, to the index item for the constituent material of which the article is made.
